Rensselaer Polytechnic Institute (RPI), GPA: 3.23/4.00
Bachelor of Science in Computer Science
Bachelor of Science in Economics

Troy, NY
December 2023
December 2023

SKILLS

Software Tools	React, Git, GitHub, Flask, Microsoft Excel, Linux, GoCD, Cypress, MongoDB, XML, Microsoft SQL Server
Programming Languages	Python, C++, C, SQL, R, Java, JavaScript, HTML, CSS, XSLT, Batch Scripting
Project Management	Agile, Scrum, Jira, Confluence

ACCOMPLISHMENTS

SQL (Basic) HackerRank Certification	March 2024
RPI Medalist Scholarship	May 2019

WORK EXPERIENCE

SS&C Eze <i>Associate Engineer</i>	Boston, MA August 2024 — May 2025
--	---

- Employed **XSLT**, **SQL**, and **XML** logic to build 18 custom programmatic interfaces between 5 clients and 11 third parties
- Designed efficient **SQL** code to parse, map, and load daily external stock position data into internal databases for both downstream and end-user applications, reducing manual intervention by 95% for ongoing support teams
- Troubleshot intricate **SQL**, GPG encryption, and SFTP file transmission issues, saving clients over 30 hours per project
- Collaborated across department teams to form implementation teams to onboard 3 new clients to the SS&C Eze Order Management System (OMS)
- Pioneered creative solutions for custom file requirements, including writing over 12 tailored **batch scripts** across 5 clients

Northrop Grumman <i>Software Developer Co-op</i>	Linthicum, MD March 2022 — August 2022
--	--

- Deployed a 9-month long full stack web application developing the front-end interface with **JavaScript**, **React**, **HTML**, and **CSS**
- Programmed back-end structure of the web application with the **Flask** framework to make RESTful APIs in **Python** and store thousands of records with **MongoDB**
- Trained in an **Agile** environment practicing Object-Oriented Programming (OOP) and **Scrum** methodologies with 3 code reviews every 2 weeks
- Asked questions and documented notes in stakeholder meetings every 3 weeks, then uploaded notes to **Confluence** and debriefed other software team members; Tracked code and project progression with **Jira** daily
- Wrote and ran scripts using **Python** to pull from thousands of records in **MongoDB** and updated the database based on stakeholders' requests
- Guided and directed the Software Development Life Cycle phases, including the design, deployment, and testing of scalable, maintainable, and well-documented code
- Wrote and ran unit tests and integration tests for newly made features utilizing **Cypress** and **JavaScript** reducing manual testing time by 50%
- Incorporated a **GoCD** pipeline to run automated tests for continuous integration/continuous delivery (CI/CD)
- Engineered PUT, POST, and GET endpoints for 4 unique components

PROJECT EXPERIENCE

Rensselaer Polytechnic Institute <i>Database Systems</i>	Troy, NY January 2023 – May 2023
--	--

- Programmed and executed hundreds of simple to advanced **SQL** queries for data extraction, transformation, and loading
- Designed, developed, and implemented **SQL** server databases, tables, views, stored procedures, functions, and triggers
- Practiced database design and architecture using Boyce-Codd Normal Form, Third Normal Form, and Fourth Normal Form
- Specialized in the relational database management system (RDBMS) **PostgreSQL** and incorporated aggregate functions, joins, and sub-queries to write advanced **SQL** queries
- Created 2 new **PostgreSQL** users through the shell and made 3 new roles applied to the users to enhance security
- Constructed 4 new databases containing 7 tables each within **PostgreSQL** and imported data via dump files

<i>Website Development</i>	August 2022 – December 2022
----------------------------	-----------------------------

- Created a full-stack movies web application bootstrapped with **React** App and coded with **JavaScript**, **React**, **HTML**, and **CSS**
- Analyzed **React**'s documentation to write 11 components including separate pages for actors, movies, TV shows, and directors
- Led weekly group discussions in a 5-person team about design, implementation, documentation, and workload
- Constructed a search mechanism to filter results by directors, actors, movies, and TV shows to increase usability by 25%
- Implemented a homepage component with features such as a header, home button, and images of featured actors/actresses
- Populated website content with The Movie Database (TMDB) API calls
